Problem Set 1

Jason Li

September 8, 2023

1 Introduction

My goals of this course are to develop a more rigorous understanding of the use of numerics and computer science in physics. I have a fair bit of experience in Python, mostly in dataframe manipulation and also web scraping. I have no particular plans after I graduate, but I would like to explore some real-world applications of mathematics. If I still do not have a particular plan, I may continue on to graduate school.
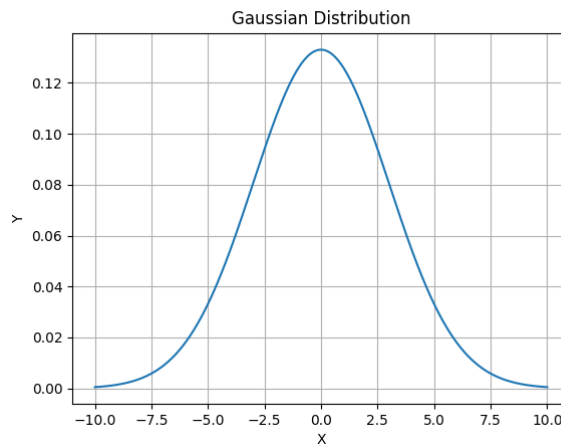

My github account is https://github.com/jli21.
